## **You plant Nur-sery Stock as an Investment**

---

---

Pay a fair price for it and secure the best. Select your Nursery the same as you select your banker, lawyer, doctor, or merchant.

The planter buying cheap trees never fools anyone but himself.

## **WE GUARANTEE OUR STOCK TO LIVE AND BE TRUE TO NAME**

We will cheerfully replace any tree, shrub, or other plant at any time should it prove untrue to name. We will also replace any stock, except Evergreen, that fails to grow after being properly planted and cared for, if we are notified before the first of the following August, and the stock is allowed to stand as planted so we can examine it should we so desire. We hold ourselves liable only for the original amount paid us for the stock and replace only stock which has been paid for in full.

See special Evergreen guarantee under Evergreens.

---

"You get what you pay for," is a rule that applies to Nursery Stock just as it does to anything else. Shrubs, Trees, and other plants cannot be measured accurately like water-pipes, carpets or automobile tires. They are sold by size it is true, but a two or three foot shrub may have a bushy top and fine roots or it may be composed of a crown, one upright branch, and a single tap-root. Only from a Nursery of established reputation can you be sure of getting bushy, well-rooted plants of uniform good grade.

Ilgenfritz Trees are guaranteed to be of generous size, vigorous and healthy when delivered.

## **WHY IT PAYS TO BUY CELLAR STORED GOODS**

In the spring when the temperature reaches a certain point and moisture conditions are right, sap starts to flow through dormant plants, and buds swell and break, producing new leaves and shoots. Growth has started. This change from inactivity to vigorous growth takes place in the few warm days following winter. Afterwards it is difficult to transplant trees or shrubs without killing them or at least seriously harming their growth. If, however, these plants are taken out of the ground in the fall as soon as they become dormant, placed in a cool dark cellar where the humidity is correct and the temperature is kept fairly constant, they will lie there alive but making no growth for the next year or until removed and then will burst forth in full vigor.

For this reason Ilgenfritz Trees are carefully stored in the fall in cellars where the temperature and dampness is constantly watched throughout the winter and are delivered to you at any time during the spring, ready to grow when you plant them.

This is not a new or untried principle. Ilgenfritz Trees have been handled successfully this way since 1862.

### **GIVE THE CORRECT VARIETIES, SIZES and PRICES IN YOUR ORDER.**

Do not specify exact sizes. An order for an 18-inch shrub or 10-foot tree will not be accepted. Make your sizes read 18 to 24 inches; 8 to 10 feet.

---

**NO ORDERS ACCEPTED AMOUNTING TO  
LESS THAN TWO DOLLARS.**

**THIS PRICE LIST CANCELS ALL PREVIOUS PRICES.**

## SHRUBS

### LARGE SHRUBS FOR IMMEDIATE EFFECT

We have a limited number of shrubs which have been carefully grown in special wide Nursery rows and transplanted frequently enough to insure fine compact root systems. These shrubs, comprising varieties of Dogwood, Deutzia, Forsythia, Honeysuckle, Mockorange, Spirea, Lilac, Viburnum, and Weigela will be available until the supply is exhausted. They are of specimen grade, and should be dug with a ball of earth like evergreens. For certain situations where large shrubs are wanted immediately we advise their use and know they will give satisfaction. We will be pleased to make special quotations on these shrubs upon request.

**Woodbine****See Lonicera****R O S E S****HOW TO SUCCEED WITH ROSES****Where to Plant Them and When**

Roses do best on well drained land so it is well to select a spot which has natural drainage or to provide drainage by means of tiles, or a layer of 2 to 3 inches of crushed stone placed 18 inches to two feet below the surface. Although spring is the proper time to plant, the soil should be prepared in the fall by digging down to a depth of 18 inches and mixing with about one-third well rotted manure.

**How to Plant Roses**

It is best to plant roses as soon as they are received from the nursery but if this is impossible they should be unpacked, laid in a shady place in the garden and well covered with loose dirt. The roots should not be exposed to the air any more than is absolutely necessary, they may be submerged in a pail of water until just before they are set. Before planting all damaged or broken roots should be cut off. The tops should also be trimmed back to the crown with the exception of the two or three strongest branches which should be cut back to the last three leaf-buds. Before planting a hole should be dug large enough that the roots will not be crowded in any way. The rose should then be held in the center of the hole so that the crown or place where the branches

**ROSES—Continued**

start is about an inch below the surface of the soil. The loose dirt is then carefully placed about the roots until the hole is nearly filled. This dirt should then be vigorously packed with the heel and the hole filled to the brim with water. After this water has settled completely the rest of the soil is placed in the hole and thoroughly packed with the foot. The surface of the ground should then be carefully raked so that there is a one or two-inch layer of loose dirt to act as a mulch.

**Cultural Suggestions**

Roses should be watered once weekly the first year they are planted except in seasons where there is much rain. Prevention is better than cure so it is advisable to spray weekly during the growing season with bordeaux mixture and arsenate of lead. This compound may be purchased ready mixed in small quantities from local seedsmen or drug stores.

Throughout the summer it is necessary to keep the roots well watered and the soil well cultivated. This last will assist in keeping the plants clean of insects and diseases but should insects be found they may be controlled with a spray of a solution of one teaspoonful of nicotine sulphate (Black-Leaf 40) and one-tenth of a cake of ivory soap to two gallons of water. This spray should be repeated until the insects are under control.

**Winter Care**

After the first heavy frost a layer of dirt 10 inches high should be heaped up about the plant. When this is frozen, but not before, the whole should be covered with a thick layer of straw or leaves. In the spring, about April 5th to 10th, the layer of leaves or straw should be removed and about a week later, after the frost leaves the heaped-up dirt, it should be taken away. It is then time to prune the roses again. Climbing roses, however, should only be pruned when it is necessary to keep them within bounds.

Roses are essential in any garden. Whether there be a single plant covering a wall or a well planned garden plot of rose bushes, the effect is one of color and beauty not to be obtained by any other type of plant.

The Roses listed below are large and first quality 2-year field grown bushes not to be confused with the cheaper grades sold in stores or by mail order houses.

We have put a few of the most popular hardy sorts in blackfaced type for ready reference.

# EVERGREENS

## CONIFEROUS EVERGREENS

No efforts have been spared to make these evergreens the best that can be produced. They are grown in specially wide rows, root-pruned, and transplanted sufficiently to insure a good root system, and carefully trimmed to produce full even shapes and proper bushiness.

## Special Evergreen Guarantee

We guarantee our Evergreens to be well dug, properly balled and burlapped and delivered in good condition. Due to the various uses to which they are put by the customer we feel that here our responsibility ceases. We do not mean by this that Evergreens are any less hardy than other classes of Nursery stock but that they are often planted in positions in which no plant can thrive.

Prices following are for individually selected trees. They are carefully dug with a solid ball of earth which is kept intact with a covering of burlap. In this way only trees can be delivered with the fibrous roots undisturbed.

## PERENNIALS

The permanent flower. The plant dies down each year only to return again the next year with renewed vigor and increased size. These plants have flowers of almost every known color and shape. Plant them by the dozen and reap a huge benefit each year, of color and fragrance.

† denotes cut flowers.  
 o good for shady places.  
 \* suitable for rock gardens.  
 First quality large clumps

## FRUITS

### WHY ILGENFRITZ TREES ARE GOOD TREES

1. They are grown on the best root-stocks obtainable.
2. They are carefully budded or grafted with wood from trees of notably excellent bearing characteristics by men of long experience.
3. They are trimmed by experts so they will have proper structure.
4. They are properly sprayed, cultivated, and fertilized while they are in the nursery and are thus kept growing vigorously.
5. They are not dug until thoroughly ripened.
6. They are carefully stored and watched constantly throughout the winter.
7. They are accurately graded by both height and caliper wherever practicable.
8. We make constant effort to enlarge our lists by adding good varieties, and improve our methods of growing, thereby bettering our service to our customers. To this end we offer this year a Top-Worked Trees.

---

## STANDARD APPLES

Apple Orchards are an investment. Five to ten years after planting they pay big profits. A very few trees planted in a back yard will often yield surprising returns.

### Accurate Grade

## DOUBLE WORKED VARIETIES

In past years, we have had a great demand for this type of tree. For this reason, we now offer the below listed varieties. It is claimed by some growers that Double Worked trees are more vigorous and come to bear earlier. In the case of Grimes Golden the double working is almost a necessity as this tree is very susceptible to Collar-Rot, a disease which attacks the tree at about the level of the ground and soon kills it. All the below listed varieties are top-worked on varieties extremely resistant to Collar-Rot.

**DWARF FRUITS**

In the garden or small yard where standard trees take too much space, dwarfs should be planted. They require the same care as standard trees but bear young, and have low, broad heads. Fruit is easily picked. They can be planted 10 to 12 feet apart.

We grow only the varieties listed below in dwarf trees. Do not order other varieties.

35 ft. x 35 ft.....	35
40 ft. x 40 ft.....	27
50 ft. x 50 ft.....	18

**Rule for Figuring Planting Distances**

Multiply the distance in feet between the rows by the distance the plants are apart in the rows and the product will be the number of square feet for each plant or hill; which divided into the number of feet in an acre (43,560) will give the number of trees to an acre.
